# CLOUD PBX

FULL CONTROL
EASY TO MANAGE
PAY PER CUSTOMER

3CX CLOUD SERVER - HOSTED PBX
3CX PHONE STYSTEM AS A VIRTUAL PBX FOR CUSTOMERS

Cloud based PBX demand is growing. Virtual PBX is attractive to smaller customers but comes with a price: Existing Virtual PBXs have basic feature sets and the companies providing them take control of your customers and make you dependent on their Quality Control and support procedures. A potential recipe for disaster for customers and resellers.

Enter 3CX Cloud Server. A platform designed to host 3CX Phone System as a hosted PBX for your customers and allow resellers/hosters full control of data and quality. Rather than a scaled down basic PBX, 3CX Cloud Server offers customers a fully virtualized 3CX Phone System instance, together with the advanced feature set that 3CX is known for: Enterprise PBX features, unified communications and broad client support, backed by a global brand. Now you can offer customers a Virtual cloud based PBX without compromising functionality.

- Feature rich PBX platform
- Softphones for Smartphones & Laptops
- Supports popular IP Phones
- Supports popular SIP Trunks
- No upfront software investment
- Easy to manage
- Deploy remotely at customer site
- Pay as you go for per customer
- Leverage 3CX brand
- Sell to 15,000 3CX partners

3CX
Innovating Communications

How it Works

3CX Cloud Server is a separate edition of 3CX Phone System that allows you to host up to 50 separate 3CX Phone System instances on one Windows Server machine. Each instance is entirely separate from the other. Leverage your Windows & 3CX knowledge and avoid having to learn a complex software platform to offer a hosted / virtual PBX. Connect each instance to its own dedicated SIP trunk or Gateway port and keep call billing perfectly separated for each customer.

Pay only for paying customers

Unlike other Hosted PBX platforms, 3CX Cloud Server can be deployed at no cost. Only when you sign up a customer, you will need to purchase/lease a license key for that customer. Get started with 3CX without investment and acquire new customers without having to buy an expensive hosted PBX platform.

Manage all 3CX Instances From a Central Console

The central console allows you to quickly manage 3CX Phone System instances. Deploy new customers at the click of a button by importing users and trunks automatically. Switch into a customer configuration to assist a customer with PBX configuration. You can even manage the 3CX instances via an API.

Allow Companies to Manage User Settings With Granular User Access

Allow customers to manage their own extensions, but not Trunk, Gateway and other system configurations. This avoids a heavy supported burden and gives customers the flexibility they want in configuring their phone system.

Easy deployment with Remote Provisioning

3CX Cloud Server can easily provision remote IP Phones and 3CXPhone instances via the bundled SIP Session Border Controller component which acts as an agent for provisioning requests. With the Session Border Controller you can send phones readily configured for true plug and play at the customer site.

Eliminate Firewall and Bandwidth Issues With Session Border Controller

3CX Phone System features a unique Session Border Controller, which allows all SIP traffic for the customer to be tunneled over a single port. Drastically simplify remote installs and eliminate firewall configuration issues. Furthermore, the intelligent 3CX Session Border Controller can detect calls being made between local extensions and avoid sending audio streams to the virtual PBX – saving valuable bandwidth and drastically improving audio quality. The Session Border Controller is available for Windows and Linux, allowing you to run it on either an existing Windows machine or a low cost Raspberry PI device.

Backup & Update all 3CX Phone System Instances With the Backup Tool

The cloud edition offers a backup, update and restore tool that is able to backup all instances on the machine and restore all instances on another machine if need be. Automate backup on a scheduled basis and restore all instances in minutes in case of hardware failure.

Full VMware and Hyper-V Compatibility

If you want to leverage your existing VMware or Hyper-V investment you can do so with 3CX Cloud Server. It has been verified and tested against the leading virtualization platforms and allows you to take full advantage of VMware and Hyper-V management and redundancy features.

Thousands of companies worldwide rely on 3CX
